

Project Statement

This series of new entrance “gates” was implemented after the construction of the new Skier Services Building, to bring a consistent vernacular of materials and color to the existing resort.

Local quarried stone and engineered log framing were utilized to replace and redesign the; Main Resort Drive Entrance, The Center Lobby Entrance, The Conference Center Entrance and the Hotel Entrance.

Green standing seam metal roofing, also consistent with the new Skier Services Building were used on all structures to give aesthetic consistency to the structures. Seven Springs continues to upgrade their buildings with these materials during the course of their on-going facilities maintenance planning.

All uniquely designed for their specific function, each of these “gateways” ties to existing structures of various materials and forms, providing a common element throughout the resort.

THE GATES OF SEVEN SPRINGS MOUNTAIN RESORT
